Business Builder

Business Builder and Windows Vista

Business Builder version 3 and later will operate successfully with Windows Vista, but it is necessary to change the compatibility settings in Windows Vista.

Business Builder should be installed in the usual way using the installation program. During the installation process, ensure you select to have an icon added to your Desktop.

After installation is complete, perform the following steps:

1. Right-click on the Business Builder icon.

2. Select "Properties" from the pop-up menu (the last item).

3. Click on the "Compatibility" tab.

4. Ensure there is a tick in "Run this program in compatibility mode for:"

5. Select Windows XP (Service Pack 2) from the drop-down list.

6. Under the "Settings" section, leave all tick boxes unticked.

7. Under "Privilege Level", put a tick in "Run this program as an administrator".

8. Click on "Show settings for all users" and select the same settings as in 4 to 7 above.

9. Click on OK twice to return to Desktop.
